Narrative Description of Research, Teaching, and Service Interests

From the beginning of my career, my principal areas of expertise have been Southwestern studies and ceramic analysis. Most of my research has concerned ceramic production and exchange and the economic basis for the emergence of communities in the American Southwest. I have conducted materials analyses of ceramics at Los Alamos National Laboratory and the Smithsonian Institution to resolve particular research questions. Gender, ideology, and learning frameworks have played an important role in my research, writing, and teaching. I am currently involved in collaborations looking at organic residues on ceramics with scientists at Sandia National Laboratory, the UNM Department of Chemistry, and the Hershey's Technical Center in Pennsylvania. My NSF-funded project examines artifacts from the trash mounds at Pueblo Bonito in Chaco Canyon, and employs four graduate and four undergraduate students.

I teach courses that reflect my research interests, such as Southwestern Prehistory, Ceramic Analysis, Ceramic Theory, and Archaeological Approaches to Gender, as well as courses that meet the needs of the Anthropology Department, such as Archaeological Method and Theory, Current Debates in Archaeology, and Archaeological Research Design and Proposal Writing. I created a course on Teaching Anthropology to prepare our graduate students for careers in academia. I particularly strive to provide hands-on experience with laboratory methods. My courses also introduce students to professional activities, such as paper presentation, poster preparation, and grant proposal writing. My teaching methods encourage active learning and engage different styles of learning, but the specific methods used in the classroom vary depending on the subject matter. For Archaeological Method and Theory, I combine lecture, slide presentations, video clips, and class discussion in the classroom portion of the course, with hands-on activity-based learning in the laboratory portion of the course. In class and laboratory portions are integrated so that students understand first what archaeologists do and then learn the methods themselves. And the laboratory portion of the course encourages cooperation among students as they work together to complete the exercises. I teach Southwestern Archaeology as a writing intensive class, with three essay exams and multiple take home exercises designed to engage the students in synthesis of existing data sets, introducing them to the complex testing methods used by archaeologists to interpret data. In all of my graduate courses, I insist on engaged discussion and all students must complete an activity that prepares them for life as a professional: preparing a poster or oral presentation in the style of the national meetings, giving job talks, lecturing to large classes of undergraduates and being videotaped for later self critique, and running discussion sections. I want students to gain more than knowledge from my classes through experiences that will help them with their professional lives. I give prompt feedback in all classes, through written evaluations, notes on assignments, or in-class assessments. I have high expectations of all of my students.

I have served the profession in a variety of capacities for the American Anthropological Association, the Society for American Archaeology, and the Society for Archaeological Science. I particularly served as Chair of the Archeology Division of the American Anthropological Association, a division with 1500 members. I have consulted with the Museum of New Mexico's Museum of Indian Arts and Culture, the National Park

Service, the U.S. Bureau of Reclamation, and private archaeological contract firms. I have served as an outside reviewer for 28 tenure and promotion evaluations at 18 different universities and as an outside reviewer on one departmental review. I have served on several departmental and university committees. I volunteer frequently in the Albuquerque Public Schools, Rio Rancho Public Schools, and the Albuquerque Academy.

Research Experience

- 2007-2010 Material Culture of Pueblo Bonito Mounds study. Thorough analysis of artifacts from 2004-2007 UNM excavations in the trash mounds at Pueblo Bonito.
- 2007-present Organic residue analysis of ceramics from Pueblo Bonito with collaborators from Sandia National Laboratory, UNM Chemistry Department, and Hershey's Technical Center.
- 2005-2007 Co-Director, Chaco Stratigraphy Project, Chaco Canyon, New Mexico. Reexcavation of trenches through the trash mounds at Pueblo Bonito.
- 1998-present Principal Investigator, Becoming a Potter Study. Study of how children learned to become pottery producers in the American Southwest. Whole vessel study of pots in 8 museums.
- 1996 Co-Director, University of New Mexico Archaeological Field School, Canada de Cochiti, New Mexico.
- 1985-1990 Director, Southern Methodist University Archaeological Field School, Pot Creek Pueblo, Taos, New Mexico.
- 1984-1991 Principal Investigator, Salado Polychrome Study. Compositional study carried out at Los Alamos National Laboratory and Smithsonian Institution. Whole vessel study of collections in 8 museums.
- 1980-1984 Project Supervisor, Salt-Gila Aqueduct Project, Arizona State Museum, University of Arizona.
- 1979-1980 Assistant Project Supervisor, St. Johns Project, Arizona State Museum, University of Arizona.
- 1976-1979 Crew Chief, University of Arizona Archaeological Field School, Grasshopper, Arizona.
