

School of Medicine

Masters of Public Health (MPH)

Broad Learning Goals

- A.** Knowledge of basic principles and core functions of public health
- B.** Integration of knowledge, theory and practice
- C.** Communication
- D.** Cultural skills
- E.** Professional behavior

Student Learning Outcomes

- A1.** Apply the basic public health sciences, including epidemiology, health and policy administration, behavioral and social sciences, biostatistics, and environmental and occupational public health, to the prevention of illness and injury.
- A2.** Apply appropriate theory, research principles, and methods to the development and evaluation of community health prevention/intervention programs.
- A3.** Assess the role of health care systems and health policies in the prevention of illness and injury.
- B1.** Identify approaches to public health problems that are appropriate for diverse populations.
- B2.** Integrate epidemiologic, community and policy perspectives in the critical evaluation of public health literature.
- B3.** Apply public health theory, knowledge and skills in a practice setting.
- C1.** Communicate effectively both in writing and orally to diverse professional and lay audiences regarding public health issues
- D1.** Identify the role of cultural factors in determining disease, disease prevention, health promoting behavior, and health care services organization and delivery
- E1.** Apply ethical principles to the practice of public health in a variety of settings.
