ECONOMIC RESEARCH

FARMINGTON IN REGIONAL CONTEXT

Farmington is the principal city in San Juan County and the sixth largest city in New Mexico. Farmington is home to approximately one-third of the County's residents, but these residents receive 42% of the County's aggregate income and the city's businesses generate 57% of the County's taxable gross receipts. By comparison, Aztec, which has the second largest aggregate income in San Juan County, has only 6% of the County income.

Detailed tables on the regional demographic and economic characteristics of the Four Corners region, including San Juan County, the City of Farmington and the Navajo Reservation, are included in the Appendix. As these tables show, Farmington's population is generally older than that of San Juan County, the Navajo Reservation and the Four Corners region as a whole. Also, Farmington has a much larger percentage of white/non-Hispanic persons (64%) than the County (47%) and the Four Corners region (33%), and a proportionately smaller Native American population. Farmington residents are also better educated than those in other parts of the Four Corners regions: persons living in Farmington at 25 years old or older are 25% less likely to have left school without a high school or equivalent degree, and are 60% more likely to have received a post-secondary degree than other San Juan County residents. Further, Farmington residents are more than twice as likely to have completed a graduate degree than other County residents.

Income differentials are consistent with the educational trends. The median income of Farmington households is one-third higher than the median income in other parts of the Four Corners region, and one-fifth higher than in other parts of San Juan County. Higher income households are particularly concentrated in Farmington: although less than one-third of San Juan County households are located in Farmington, more than one-half of households with incomes over \$100,000 per year are located in the primary city.

The housing market is tighter in Farmington than other parts of the Four Corners area, and, consequently, housing is generally less affordable. In Farmington, housing vacancy rates are only 7%, half that of the remainder of the County. Despite higher incomes, housing consumes a greater share of household incomes in the city: two-thirds of households with annual incomes below \$20,000, and 38% of households with incomes between \$20,000 and \$50,000 spend more than one-quarter of the income on housing in Farmington, a far greater share than those earning similar incomes in other parts of the County and the Four Corners region. To a significant extent, higher payments reflect superior housing quality, a comparison strongly influenced by the appallingly poor housing conditions on the Navajo Reservation. While virtually all housing units in Farmington have complete plumbing, telephone service and non-wood heating, a near majority of housing units on Indian land lack these basic features.

The importance of Farmington as a market center of San Juan County and the Four Corners region is revealed the pull factors presented in Tables 18. These numbers show

FARMINGTON MAINSTREET: SOCIOECONOMIC ANALYSIS

the effectiveness of the Farmington in attracting funds from the region as a whole. Two patterns are worthy of note. First, Farmington's markets serve a community far larger than the city alone. In 1999, the most recent year for which these data can be calculated, taxable gross receipts in Farmington were 194% of what would be expected from Farmington consumers alone; retail business accounted for gross receipts of 245% of a local baseline. On a net basis, these data indicate that Farmington markets brought more than \$600 million into the city. Based on a Gross Receipts tax rate of 1.1875% for Farmington and 0.375% for San Juan County, these sales represent an additional \$7.3 million and \$2.3 million in revenues for the City and County governments, respectively¹. The second pattern that is evident in these data is that during the 1989-1999 period the relative strength of Farmington in regional economy has increased. The net inflow of receipts into Farmington from other areas grew by 42% half in real terms, from \$432 million (1999 dollars) in 1989 to \$614 million in 1999. The improvement was evident in nearly every category, but especially in various retail trade markets and services, which expanded from a marginal surplus to a significant contributor to the local economy.

The next table summarizes the same information for San Juan County. Again, the County is in a positive trade position: in 1999, \$664 million more flowed into the County's economy than flowed out. This indicates that San Juan County as a market center for the Four Corners economy, likely because of a strong flow of dollars from the Navajo Reservation. Not surprisingly, the pull factors for San Juan County are in most cases lower than those in Farmington, which only underscores that while County is a market center for the region, Farmington is also the market center of the County. Also, though to a less degree than Farmington, San Juan County improved its position as a regional center during the 1989-1999 period. Over the 10 year period, the net flow of funding into the County increased by \$150 million (1999 dollars), or 29%. Improvements were significant in retail trade, where inflows increased by 89%, and to an even greater extent, in services, where the County moved from a strongly negative position to near balance.

DEMOGRAPHIC & ECONOMIC PROFILE OF THE PROPOSED METROPOLITAN REDEVELOPMENT AREAS

The total residential population of the 3 proposed metropolitan redevelopment area neighborhoods – Downtown, Civic Center and Animas – was 1,106 in 2000 (US Census 2000); nearly all live in the Civic Center and Animas neighborhoods. Compared to Farmington as a whole, the population of these neighborhoods is significantly older: 28% of downtown residents are over 50 years of age, compared to 19% for the entire city, while only 24% are less than 17 years of age, compared to 29% for all of Farmington. Significantly, the share of the downtown population that is between 25 and 39 years old – often seen as critical to redevelopment initiatives – is only half that of Farmington as a whole: 10% compared to 20%.

¹ The county rate has since increased to 0.6875% for San Juan County.

FARMINGTON MAINSTREET: SOCIOECONOMIC ANALYSIS

Ethnically, compared to Farmington as a whole, the three MRA neighborhoods have a relatively smaller white population (48% versus 64%) and larger Native American and Hispanic populations (24% each in the MRA neighborhoods versus 17% and 18%, respectively, in the city as a whole). The white population is disproportionately represented among the older population of the MRA neighborhoods (the proportion of each age cohort from 40 year old and up that is white is below the overall average) and underrepresented among the younger populations. Native Americans and, to a less extent Hispanics, are disproportionately represented among the 25 to 39 year old population.

Analysis of economic patterns of the MRA neighborhoods must rely on geographically aggregate information and should be considered with caution.² The 1999 median household income in Block Groups 4.02-5 and 1-1 was only \$26,858 per year, 71% that of Farmington as a whole. 35% of households in these areas had incomes below \$20,000 per year, compared to 24% in the entire city. Conversely, only 18% of households in these areas earn more than \$50,000 per year and none earn more than \$100,000, while 36% of households in Farmington earn above \$50,000 and 8% earn more than \$100,000. Lower incomes are also reflected in higher incidence of poverty. In the targeted neighborhoods, 23% of all households live below the poverty line and 44% live below 150% of the poverty line, compared to 16% and 28% for the Farmington as a whole. Interestingly, poverty downtown does not afflict racial and ethnic groups equally. While Native Americans and white/non-Hispanics are far more likely to live in poverty downtown than other parts of the city (62% versus 32% for Native Americans and 15% versus 9% for white/non-Hispanics), Hispanics and Latinos living downtown, despite low median household income, are much less likely to live in poverty than those living in other parts of Farmington (14% versus 24%). As might be expected, lower incomes and higher incidence of poverty downtown correlated with lower rates of educational achievement. Fully 26% of downtown residents 25 years or older have failed to earn a high school equivalent degree, compared to 16% in other parts of Farmington; conversely, only 22% of downtown residents have a post-secondary degree, versus 27% in the rest of the city.

The housing stock in the two downtown Block Groups is older than that of the other areas in Farmington (in 2000, the median age of housing downtown was 35 years compared to 26 years throughout the city). Vacancy rates are far higher (18% versus 7%); rentals are much more common (52% of units compared to 30% for the city); and homes are smaller

² Census Bureau data on the geographical scale appropriate to the analysis of the MRA neighborhoods (Blocks) is limited primarily to demographics. Analysis of economic patterns must rely on Census sample data (SF3), which is available only on the broader geographic scale of Census 'Block Groups'. Block Groups do not correspond to the MRA neighborhoods, but the combination of two Block Groups (Tract 4.02, Group 5 and Tract 1, Group 1) offers a useful approximation of the three MRA neighborhoods. These two Block Groups include 76 of the 86 Blocks that comprise the proposed MRAs. However, these Block Groups also include 34 Blocks that would *not* be included in the MRAs. These additional blocks are west of the proposed MRAs, west of North Loretta Avenue and Lake Street to the confluence of the La Plata and San Juan Rivers.

FARMINGTON MAINSTREET: SOCIOECONOMIC ANALYSIS

(median 4.0 rooms per unit versus 5.2) and more likely to part of multi-unit structures (26% versus 18%). Values of owner-occupied housing are much lower (\$67,541 compared to \$100,600); mobile homes are more prevalent and of far more marginal value in downtown neighborhoods than in other parts of the city (23% versus 18%; \$13,354 per unit versus \$31,100). But because of lower incomes and despite lower property values, housing was significantly less affordable downtown than in other Farmington neighborhoods: the median expenditure on housing downtown was 32% and 33% for owner- and renter-occupied units compared to 24% for both in other parts of the city. All downtown housing units had complete plumbing and few depended on wood for heating (few housing units lacked these services in other parts of the city), but 6% of downtown households were without telephone service, twice the overall rate for the city.

APPENDIX TABLES

I. REGIONAL DEMOGRAPHICS

1. Four Corners Region³: Age by Race/Ethnicity
2. San Juan County: Age by Race/Ethnicity
3. City of Farmington: Age by Race/Ethnicity

II. REGIONAL WORKFORCE

4. Four Corners Region: Educational Attainment by Race/Ethnicity
5. San Juan County : Educational Attainment by Race/Ethnicity
6. City of Farmington: Educational Attainment by Race/Ethnicity
7. Navajo Reservation: Educational Attainment by Race/Ethnicity

III. REGIONAL HOUSING

8. Housing Status in Farmington & the Four Corners Region
9. Housing Quality in Farmington & the Four Corners Region
10. Housing Affordability in Farmington & the Four Corners Region

IV. REGIONAL MARKET

11. Four Corners Region: Household Income by Race/Ethnicity
12. San Juan County: Household Income by Race/Ethnicity
13. City of Farmington: Household Income by Race/Ethnicity
14. Navajo Reservation: Household Income by Race/Ethnicity
15. Status of Farmington Industries & Markets: City of Farmington
16. Status of San Juan County Industries & Markets

V. METROPOLITAN REDEVELOPMENT AREA CHARACTERISTICS

17. Age by Neighborhood
18. Age by Race/Ethnicity: All MRA neighborhoods
19. Housing Statistics by MRA Neighborhood: By Race/Ethnicity
20. Selected SocioEconomic and Housing Characteristics for MRA Block Groups

³ Four Corners Region includes La Plata and Montezuma Counties in Southwest Colorado, Santa Juan County in New Mexico, and the Navajo Reservation in Arizona, New Mexico and Utah.

⁴ Pull Factors are measured as the volume of taxable gross receipts for the City of Farmington relative to the New Mexico average, holding constant aggregate income. A value of 100% indicates that, given Farmington's income level, an industry in the City is on par with the State as a whole; a value less than 100% indicates that the industry is weak in Farmington, suggesting that local residents are spending income outside the City; and a value greater than 100% indicates that the industry in Farmington is generating more than its expected share of receipts, suggesting that Farmington is drawing revenues into the City from outside. In other applications, this statistic is references as a Pull Factor. Net Gain/Loss is the net flow of revenues into and out of Farmington associated with the given industry. Note that these values are estimations based on an assumption that Farmington residents spend their income in the same proportion as residents of the New Mexico as a whole. Change indicates the gain or loss of Farmington's position over the 1989-1999 period.
