

Trig and Pre-Calc (1230, 1240, 1250) Prep

Drop-In Tutoring for Engineering & Computing

Get help in your core STEM courses, engineering & computing specific classes, software, and coding languages.

ESS suite (CEC 2080) & online via the Penji App (with Zoom)

Tutoring schedule & more info at
ess.unm.edu/services/tutoring/

or through our app - succESS

Learning Strategies

Semester-Long Engagement Opportunities

Many are open to pre- and full majors and have no citizenship or GPA requirements.

<https://goto.unm.edu/mentoring>

MENTORING

- **BE a mentor**
...to our incoming students in their transition into the University of New Mexico, the university setting, and Albuquerque.
- **HAVE a mentor***
...who is a STEM Professional working in the field to build your network and receive guidance and support.

**This program is open to UNM STEM Majors. Priority is given to Freshmen and Sophomores, but all levels are encouraged to apply.*

<https://goto.unm.edu/internships>

INTERNSHIPS

Getting real-world experiences leads to your satisfaction with your undergraduate journey. Gain valuable hands-on experience while making professional connections.

These programs are only open to School of Engineering Students.

<https://goto.unm.edu/research>

RESEARCH

- **EPICS @UNM**
...to give back to the community, earn credit, and gain research experience all at the same time!
- **Student Research Experience Program**
...to get hands-on research experience to understand how your courses fit in to real-world applications.

These programs are only open to School of Engineering Students.

Contents

- Functions and their Graphs
- Piecewise Functions
- Composition of Functions
- Inverse Functions
- Systems of Equations
- Simplifying Radicals

Functions and Their Graphs

- "Parent Functions"
- Changes to the parent functions creates different looking graphs

- Important info about graphs can be obtained from functions
 - X and Y Intercepts
 - Domain and Range
 - Asymptotes and Holes
 - End behavior

Linear Functions

- Parent function: $y = x$
- $y = mx + b$
 - m = slope
 - b = y-intercept
- We can also solve for the x intercept
- Domain and range are $(-\infty, \infty)$

Parabolic Functions

- Parent function: $y = x^2$
- $y = Ax^2 + Bx + C$ OR $y = A(x - h) + k$
 - $(h, k) = \text{vertex}$
 - $C = \text{y-intercept}$
- Factor or use quadratic formula to find x-intercepts
- Domain is $(-\infty, \infty)$, range is based on the vertex

Parabolic Functions

Find domain, range, x and y int's, and vertex

$$y = x^2 + 2x + 1$$

$$y = x^2 + 2x + 1$$

Cubic Functions

- Parent function: $y = x^3$
- $y = Ax^3 + Bx^2 + Cx + D$
 - $D = y$ -intercept
- Factoring!!! To find x -intercept
- Domain and range are both $(-\infty, \infty)$

Higher Degree Polynomial Functions

Look at **degree** and **leading coefficient** to determine shape of the function

1. Odd degree, pos LC
2. Even degree, pos LC
3. Odd degree, neg LC
4. Even degree, neg LC

Higher Degree Polynomial Functions

Look at **degree** and **leading coefficient** to determine shape of the function

$$y = x^{12} + 2x + 1$$

$$y = -3x^4 + 14$$

$$y = \frac{1}{2}x^5$$

$$y = -x^{17} + x^{16} - x^{15} + \dots + x$$

Higher Degree Polynomial Functions

Look at **degree** and **leading coefficient** to determine shape of the function

$$y = x^{12} + 2x + 1$$

$$y = -3x^4 + 14$$

$$y = \frac{1}{2}x^5$$

$$y = -x^{17} + x^{16} - x^{15} + \dots + x$$

$$y = x^{12} + 2x + 1 \text{ (even, pos)}$$

$$y = -3x^4 + 14 \text{ (even, neg)}$$

$$y = \frac{1}{2}x^5 \text{ (odd, pos)}$$

$$y = -x^{17} + x^{16} - x^{15} + \dots + x \text{ (odd, neg)}$$

Rational Functions

- A ratio (fractions) of two polynomial functions
 - Parent function: $y = \frac{1}{x}$
 - Vertical Asymptotes: set denominator equal to zero
 - Horizontal Asymptotes: Look at end behavior
 - Boss on bottom
 - Boss on top
 - Leading coefficients
 - Holes: $\frac{0}{0}$ when $x=0$
 - Domain and range come from asymptotes/holes

Rational Functions

Find x and y int's, HA, VA, holes, domain, and range

$$y = \frac{x^2 + 3x}{x^2 - x}$$

$$y = \frac{x^2 + 3x}{x^2 - x}$$

Exponential and Logarithmic Functions

- **Exponential** $y = e^x$
 - Has a horizontal asymptote
- **Logarithmic** $y = \log(x)$
 - Has a vertical asymptote
- Inverses of each other

Absolute Value Functions

- $y = |x|$
 - Absolute value means take the “positive part” of the number or **distance from zero**
- Think about it as a piecewise function

$$f(x) = \begin{cases} -x, & x < 0 \\ x, & x \geq 0 \end{cases}$$

Piecewise Functions

- A function that is defined on a sequence of intervals
- Domain, range, holes, etc depend on
what is **included in the intervals**

Piecewise Functions

$$f(x) = \begin{cases} 2x, & x < 0 \\ 1 - x, & 0 < x \leq 4 \\ x^2, & x > 4 \end{cases}$$

Find x and y intercepts, domain and range

Is 0 included? Is 4?

$$f(x) = \begin{cases} 2x, & x < 0 \\ 1 - x, & 0 < x \leq 4 \\ x^2, & x > 4 \end{cases}$$

Coffee BREAK

Composition of Functions

- The output of one function becomes the input of another
- $f(g(x)) = (f \circ g)(x)$
 - “F **composed with** G of x”
 - “F **of** G of x”
 - Work from the inside out

Composition of Functions

Compose the following functions as both $g \circ f$ and $f \circ g$

$$f(x) = 3x + 1 ; g(x) = x^2 - 6$$

Inverse Functions

- A function that “undoes” the action of another function
- Domain and range is flipped from original function
- Find inverse functions by:
 - Swapping x and y
 - Solving for y

Inverse Functions

Find the inverse of the following functions:

$$f(x) = 5x + 10$$

Solving Systems of Equations

- Elimination Method
 - “Handcuff” the equations together
- Substitution Method
 - Isolate a variable in one equation and substitute it into the other
- Solutions that apply to both equations
 - Used to find where two lines intersect

Solving Systems of Equations

Solve the following system using elimination

$$10x + 12y = -26$$

$$-6x + 6y = -24$$

Solving Systems of Equations

Solve the following system using substitution

$$x + 3y = 18$$

$$y = -4x + 6$$

Simplifying Radicals

- Find perfect squares within the radicals to take out
- Fractional exponents = radicals
- Note – negative exponents can be moved to the denominator

Simplifying Radicals

$$\sqrt{32}$$

$$2^{\frac{4}{3}}$$

$$x^{-\frac{1}{2}}$$

Study Tips

What you can do before the semester

Mentality	Be proactive
Review	Review the self-evaluation
Explore	Explore online resources
Converse	Talk to your professor and TA
Locate	Find resources on campus, such as CTL and tutoring
Study	Form a study group, develop a study plan

Throughout the semester

GO TO CLASS

STAY ON TOP OF HOMEWORK

GO TO PROFESSOR AND TA
OFFICE HOURS, CTL, CALC
TABLE.

Start Your Semester Off Right

Join us for a **FREE**

Pre-Semester Prep Workshop Series

These interactive workshops will review all foundational material leading up to the specified course so you are better equipped to hit the ground running.

Synchronous in-person in the ESS suite
& virtual via Zoom

*Pre-Calc/Trig Prep	Monday, August 14, 2023	10 AM - 12 PM
*Calc 1 Prep	Tuesday, August 15, 2023	10 AM - 12 PM
*Calc 2 Prep	Wednesday, August 16, 2023	10 AM - 12 PM
Calc 3 Prep	Thursday, August 17, 2023	10 AM - 12 PM
<i>Math working session</i>	Thursday, August 17, 2023	1 - 3 PM
*Physics 1 Prep	Friday, August 18, 2023	10 AM - 12 PM
Chem 1 Prep	Friday, August 18, 2023	1 - 3 PM

*Attend these sessions & give feedback for access to a general knowledge exam.

RSVP is preferred but not required
