

## **Scheduled Reporting Outage:**

### **Reporting Database Upgrade to ODS 8.1**

**October 9<sup>th</sup> 2009 at 5:00 PM through October 22<sup>nd</sup>  
2009 7:00 AM**

### **Technical Details:**

The Production Reporting database ODSP version 3.1 will be upgraded to the Banner 8.X compatible version of ODS, version 8.1. Production Reporting will not be available during the outage. This upgrade will not require re-installation of the Hyperion plugin.

### **Project Governance:**

ERP Steering, ERP leadership, and Reporting Steering committees vetted the ODS 8.1 Upgrade project and agreed upon the original outage dates. The outage has been extended from October 19th to October 22nd due to an Executive Committee approved IT Data Center Power Outage scheduled for October 16th and 17th.

### **Systems Affected:**

Hyperion Production Reporting and any reporting tool using data from the ODSP reporting database.

### **Action: Plan your reporting needs ahead of time.**

All Departments that depend upon production queries and reports using Hyperion and ODSP data will not be able to access the production reporting data during the outage, and will have to plan ahead and run their reports before the upgrade on October 9th or after October 22nd. Please share this information with your technical staff, reporting teams, and management.
