Books I had sitting on my shelf that would be at a level comparable to what we covered in Stat 538-9 (certainly not a comprehensive reading list):

Daniel W (2005), *Biostatistics: A Foundation for Analysis in the Health Sciences*, Wiley, Hoboken NJ. This would be a good text for 538-9. There are lots of good examples.

Triola M M and Triola M F (2006), *Biostatistics for the Biological and Health Sciences*, Addison-Wesley, Boston. Pretty elementary, but looks like a good treatment of topics from 538.

I have lots of more advanced books I use for reference, but most require a fair amount of mathematics background to read. If you have a topic you’re interested in, ask me for references. For a lot more references, most of which I have not read, just go to amazon.com and search for biostatistics in books.
