

Math 100 Lab

Notebook Requirements for Chapter 6

Each item listed must have a **definition or rule written in your own words with an example**. Provide step-by-step directions when applicable. You will be able to use this notebook for every test. Everything on the tests will be covered in the notebook; however, not everything in the notebook will be on the test.

Your notebook must be kept in one notebook with no other notes included. I will review your notebook upon request and check it again during the final exam. This counts as 50% of your lab grade.

1. Write out the steps for factoring polynomials. Use your own words and give an example for each of the steps listed on page 368 of your textbook.
