1. The Deadweight Loss of Taxation
   a. How A Tax Affects Market Participants
      i. It drives a wedge between the price that the buyer pays and the price the seller receives.
      ii. Figure 1: The Effects of a Tax. P. 156
      iii. Figure 2: Tax Revenue. P. 157
      iv. Welfare without a tax
         (1) Figure 3: How a Tax Affects Welfare. P. 158
      v. Welfare with a Tax
      vi. Changes in Welfare
          The losses to buyers and sellers from a tax exceed the revenue raised by the government.
          Def: Deadweight loss is the reduction in total surplus that results from a tax. P. 158
          a. Deadweight Losses And The Gains From Trade
             i. Taxes cause deadweight losses because they prevent buyers and sellers from realizing some of the gains from trade.
             ii. Figure 4: The Deadweight Loss. P. 160
   b. Deadweight Loss And Tax Revenue As Taxes Vary
      a. The DWL rises more quickly than the tax.
         i. A doubling of the tax causes the DWL to increase by 4.
         ii. A tripling of the tax causes the DWL to increase by 9.
      b. Figure 6: Deadweight Loss and Tax Revenue Vary with the Size of a Tax, P. 164
         i. When taxes are very high, a cut in the tax rate can increase tax revenues.
      c. Case Study: The Laffer Curve and Supply-side Economics, P. 165
         i. The relationship between tax rates and tax revenues.

2. Determinants Of The Deadweight Loss
   a. Demand and supply elasticities
      i. The greater the elasticities of supply and demand, the greater the deadweight loss of a tax.
   b. Figure 5: Tax Distortions and Elasticities. P. 161
   c. Case Study: The Deadweight Loss Debate, P. 162

3. Deadweight Loss And Tax Revenue As Taxes Vary
   a. The DWL rises more quickly than the tax.
      i. A doubling of the tax causes the DWL to increase by 4.
      ii. A tripling of the tax causes the DWL to increase by 9.
   b. Figure 6: Deadweight Loss and Tax Revenue Vary with the Size of a Tax, P. 164
      i. When taxes are very high, a cut in the tax rate can increase tax revenues.
   c. Case Study: The Laffer Curve and Supply-side Economics, P. 165
      i. The relationship between tax rates and tax revenues.

4. Conclusion

5. Summary
