MORPHOSYNTAX
Constructions of the World’s Languages

Incomplete Draft, October 2019

William Croft

Department of Linguistics
University of New Mexico
# Summary Table of Contents

**Preface, to students and to field linguists** 1  
**Part One—Introduction** 3  
1. Grammatical Categories, Semantic Classes and Information Packaging 4  
2. Propositional Act Constructions: The Skeleton of a Sentence 29  

**Part Two—Argument Phrase Structure: Reference and Modification** 56  
3. Reference and Referent Expressions 57  
4. Modification: Semantic Types and Morphosyntactic Strategies 91  
5. The Structure and Origin of Modification Constructions 126  

**Part Three—Clause Structure: Predication and Arguments** 152  
6. Event Structure and Argument Coding: Semantics, Transitivity and Alignment 153  
7. Event Structure and Nonprototypical Argument Coding 184  
8. Argument Coding and Voice: Discourse Factors 222  
9. Argument Coding and Voice: Salience of Peripheral Participants 247  
10. Nonprototypical Predication and Nonpredicational Clauses 263  
11. Information Packaging in Clauses 290  
12. Speech Acts, Modality and Information Packaging 324  
13. Eventive Complex Predicates and Related Types 360  
14. Stative Complex Predicates, including Manner 392
Part Four—Complex Sentences 418

15. Temporal and Causal Relations Between Events:
   Coordinate Clause and Adverbial Clause Constructions 419
16. Other Semantic Relations Between Events:
   Comparative, Conditional, and Concessive 440
17. Events as Arguments: Complement Clause Constructions 461
18. Events as Modifiers: Relative Clause Constructions 477

Glossary of Terms 490

References 550
Detailed Table of Contents

Preface

Part One—Introduction

1. Grammatical Constructions, Semantic Classes and Information Packaging

1.1. What is morphosyntax?
1.2. Why constructions?
   1.2.1. The word class approach to grammatical analysis
   1.2.2. Word classes and semantic classes
   1.2.3. Language-specific categories and crosslinguistic categories: the role of constructions
   1.2.4. Constructions and the organization of this textbook
1.3. Why information packaging?
1.4. How do we compare constructions within and across languages?
1.5. How do we analyze the structure of sentences in a particular language?
Appendix A. Interpreting language examples: interlinear morpheme translations

2. Propositional Act Constructions: The Skeleton of a Sentence

2.1. Propositional acts: semantic classes and information packaging
2.2. The major propositional act constructions, and heads and dependents
   2.2.1. Anatomy of a construction: wholes and parts, and heads and dependents
   2.2.2. Types of constructions: phrases and clauses
   2.2.3. Noun, verb and adjective as comparative concepts, and prototypical constructions
   2.2.4. More on the structure of propositional act constructions
   2.2.5. Nonprototypical propositional act constructions
2.3. Three principles of the mapping between form and function
2.4. Recruitment/coexpression strategies for nonprototypical constructions
2.5. Two crosslinguistic universals of grammatical strategies

Part Two—Argument Phrase Structure: Reference and Modification

3. Reference and Referent Expressions

3.1. The semantics of referring phrases: reference and referents
3.1.1. Semantics of reference
3.1.2. Semantic categories of objects and the (Extended) Animacy Hierarchy
3.1.3. Combined means of reference, and the ontological categories
3.2. The information status of referring phrases: pronouns and articles
3.3. Information status: identity known to speaker and hearer
  3.3.1. Accessibility and the Accessibility Scale
  3.3.2. Referring phrase constructions at the upper end of the Accessibility Scale
  3.3.3. The grammaticalization of definite constructions from demonstrative constructions
3.4. Information status: real referents, but unknown identity
  3.4.1. Pragmatic specificity and the theater metaphor for referents
  3.4.2. Typology and grammaticalization paths of referents: from anaphoric to nonspecific
3.5 Nonreal referents: “indefinite” pronouns and the semantic map model
3.6. Generic reference

4. Modifiers: Semantic Types and Morphosyntactic Strategies

4.1. Information packaging and semantics of modifiers
  4.1.1. The function of modification
  4.1.2. Property concepts and scalar admodifiers: sorting referents into (sub)types
  4.1.3. Numerals, quantifiers, and set-member modifiers: selecting a referent
  4.1.4. Object concepts as modifiers: situating a referent
  4.1.5. Action modifiers
4.2. Simple encoding strategies: juxtaposition, compounding and affixation
4.3. Relational encoding strategies: case markers
4.4. Indexical encoding strategies
  4.4.1. Person indexation
  4.4.2. Nonperson indexation
  4.4.3. The classifier strategy
  4.4.4. Mismatches in indexation features and the Agreement Hierarchy
4.5. The linker encoding strategy, and a summary of morphosyntactic encoding strategies

5. The Structure and Origin of Modification Constructions

5.1. Introduction
5.2. The modification-reference continuum
  5.2.1. Anchoring and non-anchoring nominal modifier constructions
  5.2.2. Mensural and quantifying constructions
  5.2.3. Inalienability revisited
  5.2.4. The modification-reference continuum: a summary
5.3. Word order and the structure of referring expressions
5.4. Anaphoric-head constructions, apposition and the origin of referring expressions
Part Three—Clause Structure: Predication and Arguments

6. Event Structure and Argument Coding: Semantics, Transitivity and Alignment

6.1. Semantics and information packaging in the clause
   6.1.1. Predication and arguments, events and participants
   6.1.2. How many participants? How are they expressed?
6.2. The transitive construction and the prototypical bivalent event
   6.2.1. The transitive construction
   6.2.2. Basic argument structure encoding strategies, including basic word order
6.3. The intransitive construction, monovalent events and alignment strategies
   6.3.1. The basic alignment strategies
   6.3.2. ‘Subject’ and ‘object’ as comparative concepts?
   6.3.3. Active/inactive alignment, and S as a comparative concept
   6.3.4. Causativity

7. Event Structure and Nonprototypical Argument Coding

7.1. Introduction
7.2. Reflexives/reciprocals/middles: between monovalent and bivalent events
7.3. Lower transitivity: less prototypical bivalent events
   7.3.1. Motion events and the Talmy typology
   7.3.2. Contact and material verbs: manner vs. result verbs
   7.3.3. Other less prototypical bivalent events, and the Transitivity Hierarchy
7.4. Experiential events: perception, cognition, emotion, sensation—and also ingestion
7.5. The ditransitive construction: trivalent events, and possession
   7.5.1. Defining ditransitive argument structure constructions and trivalent events
   7.5.2. Major alignment strategies for ditransitive constructions
   7.5.3. The indirect object - possessive continuum
7.6. Summary of event semantic classes

8. Argument Coding and Voice: Discourse Factors

8.1. Discourse and frequency factors in voice choice
   8.1.1. The basic voice construction and nonbasic voice constructions
   8.1.2. Discourse motivation for ergative and accusative alignment, and Preferred Argument Structure
8.2. Information packaging strategies for nonbasic voice constructions
8.3. Passive-inverse constructions: constructions for more salient Ps
8.4. Antipassive constructions: constructions for less salient Ps (including noun incorporation)

9. Argument Coding and Voice: Salience of Peripheral Participants

9.1. The expression of obliques as core argument phrases
9.2. Causative constructions: strategies and functional subtypes
9.3. Applicative constructions and causative-applicative coexpression
9.4. A hierarchy of overt coding in voice constructions

10. Nonprototypical Predication and Nonpredicational Clauses

10.1. Introduction
   10.1.1. Non-prototypical (“nonverbal”) predication
   10.1.2. Predication and nonpredicational information packaging in clauses
10.2. Strategies for prototypical and nonprototypical predication
10.3. Object predication and property predication
10.4. Locative and possessive clausal constructions: predicational and presentational
   10.4.1. Locative clauses
   10.4.2. Possession clauses
   10.4.3. Other strategies for presentational constructions

11. Information Packaging in Clauses

11.1. Introduction
11.2. Topic-comment constructions
   11.2.1. Function of topic-comment constructions, and the problem of multiple referents
   11.2.2. Strategies for topics that are not the most central participant
   11.2.3. Nonparticipant (hanging) topic phrases
11.3. Thetic constructions
   11.3.1. Function of thetic constructions, and contexts typically construed as thetic
   11.3.2. Strategies for thetic constructions
   11.3.3. Weather constructions as thetics
11.4. Identificational constructions
   11.4.1. The function of identificational constructions, and contexts typically construed as identificational
   11.4.2. Strategies for identificational constructions
11.5. Summary
12. **Speech Act Constructions**

12.1. Introduction: speech act constructions and their relation to modality, polarity and information packaging
12.2. Negation of declaratives
12.3. Interrogative constructions
   12.3.1. Functional types of questions
   12.3.2. Strategies for interrogative constructions
   12.3.3. Strategies for response constructions
   12.3.4. Identificational constructions, the expression of (un)certainty, and their relation to interrogative constructions
12.4. Imperative-hortative constructions
   12.4.1. Person, politeness, and prohibitives
   12.4.2. The relation of deontic modality and predication to imperative-hortative constructions
12.5. Exclamative constructions
   12.5.1. Function and strategies for the exclamative construction
   12.5.2. The relation of mirativity and thetic constructions to exclamative constructions

13. **Eventive Complex Predicates and Related Types**

13.1. Introduction
   13.1.1. Complex predicates and information packaging
   13.1.2. Semantics and evolution of complex predicates
13.2. Eventive complex predicate constructions
   13.2.1. Semantics of eventive complex predicates
   13.2.2. Strategies for eventive complex predicates: serial verbs and related strategies
13.3. Grammaticalization and lexicalization of eventive complex predicates
   13.3.1. Grammaticalization: argument structure constructions and voice
   13.3.2. Lexicalization of eventive complex predicates
13.4. Grammaticalization of TAMP: auxiliary constructions
13.5. Support verb constructions: between grammaticalization and lexicalization
13.6. Argument complex predicate constructions: verb+argument “idioms”
13.7. Summary

14. **Stative Complex Predicates, including Manner**

14.1. Stative complex predicates: semantics
14.2. Strategies for stative complex predicates
14.3. Stative complex predicates and the modification-predication continuum
14.4. Ideophones and stative complex predicates, and ‘manner’ revisited
14.5. Motion events as complex predicates: the Talmy typology revisited
Part Four—Complex Sentences (not yet updated)

15. Temporal and Causal Relations Between Events: Coordinate Clause and Adverbial Clause Constructions

15.1. Complex sentence constructions
   15.1.1. Discourse and complex sentences
   15.1.2. Complex sentences and the main-subordinate clause distinction
   15.1.3. Information packaging of coordinate vs. adverbial clause constructions: a Gestalt analysis

15.2. Coordinate clause constructions and coordination in general
   15.2.1. Functional characterization
   15.2.2. Strategies: coordinators
   15.2.3. Strategies: balancing vs. deranking
   15.2.4. Strategies: switch reference

15.3. Adverbial clause constructions
   15.3.1. Functional characterization
   15.3.2. Other semantic relations expressed in adverbial subordination constructions
   15.3.3. Strategies for adverbial subordination constructions

15.4. Adverbial clause constructions, coordinate clause constructions, and the source of conjunctions

16. Other Semantic Relations Between Events: Comparative, Conditional, and Concessive

16.1. Comparatives
   16.1.1. Semantics and information packaging of the comparative construction
   16.1.2. Strategies for comparative constructions
   16.1.3. Equative constructions

16.2. Conditionals
   16.2.1. The semantics of the conditional relation
   16.2.2. Subordination or coordination?
   16.2.3. Epistemic stance (degrees of hypotheticality)

16.3. Concessives

16.4. More complex constructions
   16.4.1. Comparative conditionals
   16.4.2. Concessive conditionals
   16.4.3. The let alone construction

16.5. The formal expression of semantic and pragmatic relationships between events expressed in complex sentences
17. **Events as Arguments: Complement Clause Constructions**

17.1. Introduction: events as arguments (complement clauses) and events as modifiers (relative clauses)
17.2. Events as arguments: the semantics of complement clauses
17.3. Semantic types of complement clauses and complement-taking predicates
   17.3.1. Speech event and propositional complements
   17.3.2. Fact complements
   17.3.3. Event complements
   17.3.4. Complement types and semantic integration
17.4. Strategies for complement clause constructions
   17.4.1. The Complement Deranking Hierarchy (a.k.a. the Binding Hierarchy)
   17.4.2. Semantic integration and the argument structure of complement constructions
   17.4.3. Grammaticalization of complement clause constructions

18. **Events as Modifiers: Relative Clause Constructions**

18.1. The semantics and information packaging of relative clause constructions
18.2. Strategies for relative clause constructions
   18.2.1. Expression of the head (shared participant)
   18.2.2. Strategies for subtypes of relative clause constructions based on the role of the participant in the relative clause event
18.3. Anaphoric, definite and indefinite-headed relative clauses, including so-called headless and free relatives
18.4. Ambivalence between complement and relative clause

**Glossary**
